

Rosetta Fire Pit Kit

things to do first: ✓ familiarize yourself with the construction details
 ✓ mark out your location for your fire pit

STEP 1 - Excavate your location for a drainstone base and fill excavated area with drain stone, level & compact.

STEP 2 - Place and center steel ring on prepared base.

STEP 3 - Place blocks per pattern.

THEUT TIPS
 For round kit, keep blocks 1 1/2" off steel ring.

STEP 4 - after placing blocks around the ring, adjust the blocks in or out to make circle fit tight.

STEP 5 - place caps in circle around fire pit. Adjust the caps in or out to make them fit tightly together.

If the blocks do not close the circle, move all blocks slightly in. If blocks seem too long, move the blocks slightly out.
